Details of species and collection localities used in the inflorescence architecture (IA), relative growth rate (RGR), and floral development studies (SEM). N is the number of plants measured in the University of Toronto glasshouses to examine inflorescence architecture (NA, not applicable). Further information on the morphology and reproductive biology of the species studied (where available) are as follows: Cyanella lutea, Scott (1991); Heteranthera spp., Horn (1985); Monochoria korsakowii, Wang, Muira, and Kusanagi (1995); Solanum rostratum, Bowers (1975) and Whalen (1978); Wachendorfia paniculata, Ornduff and Dulberger (1978), Simpson (1990), Helme and Linder (1992).
